Vol. IX. No. 24

STEP TAKEN IN AGRICULTURAL INTERESTS

State University, State and National Departments interested with Railroads in Big Scheme.

A permanent organization of representatives of the State and National agricultural departments, the State University and the railroads interested in agricultural development in Kentucky was affected at a meeting in Louisville Saturday afternoon.

The gathering was held in the offices of the State Fair Association in the Paul Jones building in Louisville and was attended by twenty-three persons, including the two representatives from the Louisville Commercial Club.

The prime object of the meeting in brief, was to discuss the agricultural conditions in Kentucky and the best methods for their betterment. Much of the time was also given to the appointment of numerous sub-committees to plan the organization.

Another meeting is to be held as soon as the committees work out their plans for the organization. The matters relating to the boys' corn clubs, agricultural organization among farmers and the general improvement of agricultural conditions in Kentucky were also discussed. Arrangements will be made for co-operation by the several departments represented in order that the State, national and railroad agricultural departments may not duplicate each others work. By this means the greatest results may be obtained from the work of the several departments and not only the farmers and the State-at-large, but also the various railroads will profit.

The question of freight rates on the ground, limestone used for improving land for the culture of clover and other legumes was discussed and plans laid to secure lower rates on this commodity. The fertilizer rates, particularly in the South, are now very low and it is planned to secure equally advantageous rates for the ground limestone.

Secretary of State J. W. Newman was elected permanent chairman and Prof. T. R. Bryant, superintendent of the extension department of the College of Agriculture at State University, secretary.

President Finley, of the Southern Railway recently announced plans for the giving of a scholarship to the College of Agriculture to one student from each of the counties through which the Southern and allied lines run. This plan will be operative not only in Kentucky, but also in all the other States in the South in which the Southern is carrying on its agricultural work.

PARCELS POST AGREEMENT

WASHINGTON, July 20.—After a dispute of more than two months the Senate committee on postoffice and postroads Friday reached an agreement on the post office appropriation bill and the measures will be reported on Monday. The parcels post provision, the principal matter in dispute, was finally put up to Senator Bourne, the author of the original provision in the bill and Senator Bristow of Kansas, former assistant Postmaster General. The result was a compromise, rates to be established on the basis of "zones" as follows:

First zone, length fifty miles, rate 5 cents for the first pound, 3 cents

for each additional pound; second zone, length 150 miles, rate 6 and 4 cents; third zone, length 300 miles rate 7 and 5 cents; fourth zone, length 600 miles, rate 8 and 6 cents; fifth zone, length 1,000 miles, rate 9 and 7 cents; sixth zone, length 1,400 miles, rate 10 and 9 cents; seventh zone, length 1,800 miles, rate 11 and 10 cents; eighth zone, length over 1,800, rate 12 cents per pound straight. Maximum packages eleven pounds.

Senator Bourne originally proposed six zones to range in length from 50 to 2,000 miles.

As completed by the Senate committee the bill carries about \$262,000,000, or an increase of about \$4,000,000 over the House provisions.

TENNESSEANS IN FAVOR OF WILDERNESS ROAD DEAL

To Build Road From Bristol to Lexington So as To Have Outlet to Central Kentucky

The "Old Wilderness" road, traveled by Daniel Boone and the pioneers who came into Kentucky by way of Cumberland Gap, is to become an important connecting public highway between Central Kentucky and East Tennessee, if plans now being promoted by the Bristol Tenn. Board of Trade and kindred organizations in that section of Tennessee, which have organized the Bristol-Lexington Highway Association, are carried out.

The plan is to construct a great connecting highway, built of macadam direct from Bristol, Tenn., to Lexington and interest in the movement is being aroused along the proposed line of both States.

A dispatch from Bristol has the following account of the progress of the movement:

The Bristol to Lexington Highway association will be organized in Bristol the latter part of August by delegates from along the line of the proposed road from Bristol, through southwest Virginia, by way of Cumberland Gap, Tenn., to Lexington, Ky. The Bristol board of trade has had the matter up for sometime, and expects to have a meeting that will be largely attended by persons all along the proposed routes. The construction of this highway will depend chiefly on the action of two counties, one of them Scott county, Va., and the other a county just across the border in Kentucky. Scott county has called an election to vote on an issue of bonds for the grading and macadamizing of the roads of the county.

The Bristol-to-Lexington highway will be a rebuilding of the old Wilderness highway through this section to Kentucky used by Daniel Boone as he passed through East Tennessee and stopped in Washington county, near Jonesboro, Tenn., to record on a tree the fact that he had there killed a bear. He proceeded across the section that the new highway will traverse.—Lexington Leader.

Accidentally Shot

MT. VERNON, KY., July 22.—Near Livingston Sunday Miss Olah Griffin, 17, was shot accidentally. A number of young people were being kodaked and Crockett Lamb is said to have wanted his pistol to show up in the picture. While the party was being posed to this purpose the weapon was discharged the ball striking Miss Griffin in the back of the neck and lodging at the base of the brain, making a dangerous wound.

Coal Mined Last Year In Kentucky Valued At \$13,617,217

WASHINGTON, July 23.—The coal mined in Kentucky in 1911 amounted to 13,703,839 short tons valued at the mines at \$13,617,217 according to a statement of Edward W. Parker, just issued by the United States Geological Survey. This was a decrease compared with the production for 1910 of 914,480 short tons, which, considering the abnormal increase in 1910 due to strikes in other coal-producing States, is considered small. Altogether Mr. Parker says, the year 1911 may be considered as generally satisfactory to the coal mining industry of Kentucky, for in both production and value there was a substantial increase over any year prior to 1910. Compared with 1907, when the previous maximum tonnage was recorded, the production in 1911 showed an increase of nearly 3,000,000 tons in quantity and of more than \$2,200,000 in value.

The number of men employed in the coal mines of Kentucky in 1911 was 21,821; about half of these worked 10 hours a day, about one-fourth nine hours a day and the others eight hours a day. The average production for each man in these mines was 628 tons for the year and 3.3 tons for each working day. New mining and transportation developments will, it is believed, result in substantial gains in production in the near future.

Kentucky is one of the leading States in the mining of coal by the use of machines, ranking next to Ohio in the percentage of machine-mined tonnage to the total production. In 1911 more than 65 per cent of the output of 9,002,288 short tons, was mined by machines. The proportion of Kentucky coal that is shot off the solid is also much less than in the neighboring States, where the use of mining machinery has not been so highly developed.

STUDEBAKER

The army of tourists who annually visit Detroit find an additional feature of interest along the river front this year in what is said to be the largest electric sign in existence and the largest ever erected outside New York. The sign decorates Plant 3 of the Studebaker Corporation's system. This plant is located on the river bank at the corner of Clark and W. Jefferson Aves., and is admirably situated for such a display. "Studebaker Automobiles Studebaker" is the lettering, blazing forth in 340 feet of length and with its capitals ten feet high.

The sign is plainly legible from Canada and along the river for more than a mile and a half, and can be plainly seen from Belle Isle and Fort Wayne, at opposite extremes of the river. Just 2,374 five-watt, eleven and a half-volt Mazda lamps are used for illumination. Light is furnished by a 230-volt current, stepped to eleven and a half volts through thirteen low-voltage, 1000-watt transformers, each of which takes care of three letters of the sign.

The sign was built under the direction of E. H. Wilsher, chief electrician of The Studebaker Corporation.

The Camden N. J. Fire Department boasts a flying squadron that is willing to take on all-comers in a speed and efficiency test. The department has just bought three Studebaker roadsters of the "Speedster Twenty" type, has had them equipped with chemical apparatus and goes to blazes at a mile-a-minute speed rate whenever traffic conditions permit.

SIX MEN HELD IN ROSENTHAL MURDER

But Gun Fighters Who Did the Murder Still At Large

A few days ago Herman Rosenthal a gambler in the city of New York, after making some startling disclosures of the manner in which the police of that city grafted from the gambling houses by charging a scheduled list of rates to remain quiet, was shot and killed. His murderers were permitted to escape by policemen who helped plan the assassination.

District Attorney Whitman began an investigation and has unearthed one of the most dastardly plots ever formulated between a number of the police force of New York City and a band of gamblers and thugs who conspired to put Rosenthal out of the way because he talked too much. Slowly but surely the clutches of the law are tightening about the conspirators and it is expected that in a short time evidence will be in that will clear up the whole scheme.

That the case is near solution is the belief of police commissioner Dougherty who has been putting a number of suspects through the "third degree."

Sweated and grilled by a fierce third degree, Jack Sullivan, a former newsboy held as a material witness and Sam Paul, the East Side gang leader, suddenly made statements early from which the police commissioner pieced together important and heretofore missing evidence. These two men, Sullivan and Paul, were taken into custody last night along with "Bridge" Webber, the gambler.

Detectives have learned enough of the case to admit that the gunmen were gathered together on Monday night and taken to Webber's poker room, where the final arrangements for the killing of Rosenthal were perfected. Webber denies all knowledge of the shooting. Rosenthal had been talking to much and it was the day that he threatened to tell how the police grafted on gambling houses that the word was passed around that Rosenthal must be made away with.

Six men are now in custody in the Rosenthal case, one of whom is held as a material witness and five others charged with being implicated in the crime. Commissioner Dougherty, however, says that not one of the men who killed the gambler is under arrest.

District Attorney Whitman returned to the city today to take up with the grand jury an investigation of the Rosenthal case. Lieut. Decker will be permitted to testify provided he agrees to waive all immunity. The public prosecutor makes no effort to hide his belief that the shadow of Decker rests upon the Rosenthal case and in consequence will not subpoena him.

The grand jury will also take up the charges that the police profited from gambling houses by permitting them to run without molestation.

"Drys" Win

Anti-saloon interests won a victory before the Senate Judiciary Committee today when Senator Cummins was authorized to report favorably a bill giving to dry States power to intercept shipments of liquor from wet territory.

Ox Superior to Horse.

Oxen have been known to count as high as a hundred and horses as high as 30.

date for the nomination for Appel-
late Judge of the 7th District, sub-
ject to the action of the Republican
Party at the Primary to be held
August 3rd, 1912.**FRAUD THROUGH THE
U. S. MAIL****\$120,000,000 Stolen From
American People**

One hundred and twenty million dollars were filched from the American people during the last fiscal year by swindlers who operated largely through the mails, according to a statement just made in a formal report to Postmaster General Hitchcock. This is an increase approximately of thirty million dollars over that of the previous year.

Of those who are alleged to have operated fraudulent schemes 1,063 were arrested by postoffice inspectors. These included persons in all the walks of life, merchants, mechanics, politicians and professional men, paupers and millionaires.

During the year which ended June 30, last, 452 persons were convicted and sentenced and 571 cases are awaiting final disposition.

Postmaster General Hitchcock ordered the inspectors to collect evidence that would warrant criminal prosecution of swindlers so that gradually full protection against such frauds may be vouchsafed the American people.

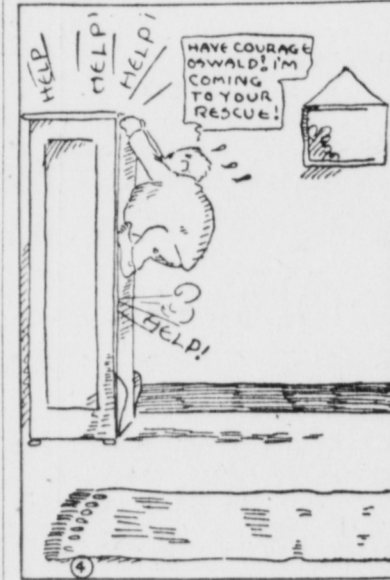

PAPERS ARE RUN FOR WOMEN

Writer in Atlantic Monthly Blames
This for the Deterioration of
Journalism.

During the past few years hundreds of journals have sprung up devoted to women's special interests. They are almost all of them showy, fragmentary, personal, concrete and emotional. It is difficult to find one that represents general or abstract interests. One of these journals, which boasts a fabulous circulation, is supported by its women subscribers and readers to oppose the larger interests of women in education, industry and political life. At least, if it does not oppose these interests, it does not aid them. Imagine a million German women sending the kaiser one dollar and a half a year to induce him to tell them once a month to go back to their kitchens, churches and children.

The newspapers of America have steadily changed during the last three decades in the same direction. Editorial pages and news columns have been steadily modified in the direction of fragmentary, egotistic, personal and sensational, or at least emotional, appeals. These are the qualities of children's minds, and of undeveloped minds everywhere. The change is, of course, all a part of the larger democratic movement of our time, and many causes have contributed to bring it about. Had women not been so active, something of the same sort would have happened, but if women were all to forget how to read over night, there is little doubt that the newspapers would find it advantageous to print more statesmanlike editorials, and more general and abstract news.—Atlantic Monthly.

Lettuce for the Flock.
Wild lettuce is a plant which is usually regarded as a worthless weed and it is when it becomes too plentiful, but the leaves, when young, are very tender and are relished by the poultry that is confined in a bare yard. It often happens also that the tame lettuce in the garden becomes old and we do not like it for the table, but you may rest assured the chickens will consume all they can get of it.

"BUY IT AT HOME"**THE HOUSE FLY AS A SCAVENGER**

One can not see that the mass of sputum in the consumptive's room has been lessened by the flies which have visited it, but the bacteriologist can nevertheless show that these flies have deposited germs of consumption in the places which they have subsequently visited. These germs are wiped off of their legs and bodies and also found in the "fly specks".

In the same way flies visit the sick-room in cases of typhoid fever, infantile diarrhea and other diseases and carry the germs into other homes. This has been proved beyond every possibility of doubt.

So far, then, from being "useful scavengers," flies fail to lessen by any appreciable amount the accumulations of filth which they visit. They do, it is true, remove minute amounts of this filth, but, so far from taking this to places where it is relatively harmless, they take it and its thousands of dangerous germs to places where it is capable of doing its greatest possible amount of harm—to the family table, the baby's milk, the baby's bottle and the baby's lips.

If the fly is useful to mankind in any way, this has not yet been shown, while it has been abundantly proved that it is a filthy, annoying and dangerous insect.

The ordinary house-fly is the one in which we are most interested, because of the annoyance and the disease and death which it causes.

The fly starts life as an egg, laid by the adult female fly. One female fly lays about 120 of these eggs. Horse manure, as shown in the exhibit, is its favorite place for them. The eggs are quite small and look not unlike short pieces of fine, white thread.

The eggs of the fly hatch within a few hours and become larvae, more commonly known as maggots. These appear as small white "worms." In warm weather thousands of these larvae can be found in any manure pile that is not properly protected.

The jar on exhibition contains a number of these larvae or maggots. After shedding their skin several times the larvae become pupae little brown cocoons, which are not so easy to see as the larvae, as they are somewhat the color of manure, and moreover do not move.

Finally, after several days, the pupae shed their skin and we have adult flies. These, after a few days, lay their eggs and thus the process goes on throughout warm weather.

In hot weather it takes only eight days for the eggs of the house-fly to develop into full grown flies.

The flies in the jars on exhibition have hatched out in the jar from larvae which were present in the manure when it was collected.

One of the chief difficulties encountered in persuading the people that the house fly is a deadly enemy of the human race is the popular misconception that flies must serve some useful purpose to mankind.

Following the catch words which some misguided individuals hit on some centuries ago, many persons think that the fly deserves to be spared because "he is such a useful scavenger."

It is somewhat difficult to understand how this opinion ever came to be accepted. A scavenger removes dangerous and offensive filth from places where it does harm, and destroys it or deposits it in places where it is relatively harmless.

A good scavenger then proceeds to cleanse and disinfect the place from which the filth was removed, so that neither danger nor offense remains.

Let us see how well the housefly fulfills its duties of a scavenger as above defined. It is true that he has unusual ability in detecting accumulations of filth and that he proceeds—he and his gang—to visit these places without waiting for official notification of their existence. But does he then proceed to destroy the filth or to remove it to a place where it is relatively harmless? The most casual observation is enough to enable one to reply to the first part of the above question.

Did any one ever see a heap of filth, even one of small proportions, disappear as the result of visitations by flies? Hardly. In fact, although swarms of flies go back and forth all day from filth heaps, at the end of the day the human eye cannot see that any appreciable amount of this filth has been removed.

But, although the pile of filth has certainly not been so reduced by flies as to be less dangerous or less objectionable than it was originally, it is nevertheless true that each fly has carried away small portions which adhere to its hairy legs and body and to its tongue, and also small portions which it has taken into its stomach.

Although these amounts are very small, they are nevertheless swarming with thousands of bacteria, many of which are capable of giving diseases of various kinds to the human race.

What becomes of these minute amounts of filth and these thousands of bacteria which flies carry off on and in their bodies? Are they taken to where "they are relatively harmless?" On the contrary, they are taken to where they are capable of doing the greatest possible harm.

For example, the sputum of a consumptive who is confined to his room is not likely to harm anyone outside of the house in which he lives unless distributed to other houses by some special agency. But flies find this sputum much to their liking. They visit it in hordes, and, leaving it, they go into other houses, where they swarm over food on the family table and over the nipple of the baby's bottle, to say nothing of their crawling over the baby's lips and even into its mouth while it is asleep.

"Sure Cure"

"I would like to guide suffering women to a sure cure for female troubles," writes Mrs. R. E. Mercer, of Frozen Camp, W. Va. "I have found no medicine equal to Cardui. I had suffered for about four years. Would have headache for a week at a time, until I would be nearly crazy. I took Cardui and now I never have the headache any more."

E 53
Take CARDUI

The Woman's Tonic

The pains from which many women suffer every month are unnecessary. It's not safe to trust to strong drugs, right at the time of the pains. Better to take Cardui for a while, before and after, to strengthen the system and cure the cause. This is the sensible, the scientific, the right way. Try it.

LOCALS

Dr. M. Pennington, of Bertha, was here Monday of this week.

Miss Roberta Cole was visiting at Siler and returned home this week.

There are bargains at Parker's, the place where you buy good goods cheap.

Edwin Sawyer, of Gatlin, Tenn., spent the Sunday with his parents in this city.

Mr. and Mrs. Jackson Morris, of Pineville, were in this city a short time last Friday.

Are you attending Parker's sale? You loose money if you do not get some of their bargains.

The August numbers of all the popular magazines have been received at the City News Stand.

LOST—One silver tating shuttle near the post office. Finder return to this office and receive reward.

Boys, buy your girl some sheet music. Where? At the City News Stand. 15 cts., 2 for 25cts.

Miss Myrtle Cole, who has been visiting somewhere down in the country, returned home the first of this week.

Miss Lettie Lusk was the guest of Misses Ida and Ollie Cole in this city the first of this week, returning home Wednesday.

Music! Music!—No, not a carload but 500 selections of the latest hits, just received at the City News Stand in the old bank building.

Mrs. Chas A. Wallace of Atlanta, Ga., arrived in this city Wednesday and will spend a few weeks with her mother Mrs. A. W. Hopper.

Parker's are making an effort to teach you that you can buy more merchandise at their store than any other place for the same money.

Miss Maude McKeehan, of Corbin was the guest of Misses Lena and Elsie Wilson the latter part of last and the first of this week.

For the next 20 days we will reduce the price on all shoes one-fourth. Herndon & Tinsley.

J. Smith Hayes, of Winchester, Democratic candidate for the nomination for Appellate Judge of the 7th district, was here on business the latter part of last week.

Herndon & Tinsley's display window contains a fine assortment of leathers furnished by the Regal Shoe Company. No better shoes on the market than Regal.

Assistant Inspector of Mines Perry V. Cole is in Lexington this week assisting in examinations of two other assistant inspectors who are to be appointed. These places are in the Earlington and the Big Sandy Districts.

Mr. John H. Byrley, of Atlanta, Ga., was called home the last of last week on account of the serious illness of his mother "Aunt" Polly Ann Byrley, but we are glad to announce that she is much improved at this time.

The Civic League elected new officers last Tuesday as follows: president, Mrs. H. C. Faulkner, Secty., Mrs. R. M. Stansbury, treas., Mrs. S. T. Steele. After the election they had their picture taken on the U. C. campus.

Thos McDonall, living in the Northend of the city suffered the loss of his home by fire last Tuesday night. It is not known exactly how the fire originated but it was well under headway before the discovery was made.

To Consumptives

Rev. Edward A. Wilson was cured by simple means of a severe throat and lung affection which developed into consumption. If you will write to Mr. Chas. A. Abbott, 61 Ave St., New York City, he will send you (FREE OF CHARGE) Mr. Wilson's full description of his cure. It will cost you nothing and may prove a blessing.

5-24-12

MRS. ANNIE COOPER

Mrs. Annie Cooper, of Paducah, who has been making her home with Judge and Mrs. J. M. Riddel for some time past, died Monday morning about 6 o'clock from tuberculosis of the lungs. Funeral services were conducted at Judge Riddel's home by Rev. J. T. Stamper and her remains were laid to rest at the cemetery Tuesday afternoon. She leaves two small children, besides other relatives and friends who mourn her loss.

Picnic Party

Miss Cora Sevier gave a delightful picnic party last Tuesday afternoon and evening in honor of Miss Flora Herndon. The party went down the river and took their lunch and report a splendid time. Those composing the party were Misses Cora Sevier, Alma Faulkner, Flora Herndon and Lucy Tinsley, and Messers George Tinsley, R. H. Newitt, Vernon Faulkner and Harry Gilbert.

Sunday School Association

The Knox County Sunday School Association will meet in Barbourville Friday, July 26th. We do not know just yet where the meeting will be held, but a preliminary meeting will be held in the Christian Church on Friday morning at 9:45 o'clock at which time announcements for further meetings will be made. W. J. Vaughn, State Field worker, will be present and have something interesting to say to the Sunday School Workers of Knox County. Let everybody interested in Sunday School work attend.

All Previous Records Broken

Miss Goldie Rairdon, stenographer of the District Attorney's office, yesterday completed the compilation of the work done by District Attorney E. P. Morrow and his assistant, S. A. Smith for the year. It shows where all previous records have been broken. Their district is a large one, and when Court is in session the attorneys are constantly busy in moving about the circuit.

The report shows fines imposed to the amount of \$37,000, of which \$8,700 was collected. The number of convictions was 423, of which 301 were pleas of guilty. The cases pending in 1911 were 220 of which very few are left on the docket. Many of the convictions were on account of bootlegging, due, it is said, to local option.

Some moonshine outfits were destroyed and the offenders punished, but for the past two years that violation of the Government laws has diminished on account of the Field Marshals hunting them. Both Mr. Morrow and Mr. Smith have been in office but about a year and have established a record for themselves for which they can feel proud.—Cincinnati Enquirer.

In Honor of Miss Flora Herndon

Miss Lillie Albright entertained at her home on River Street last Wednesday evening in honor of Miss Flora Herndon. The large party present were treated to several selections by a mixed chorus and musical numbers on the piano by Miss Lucy Tinsley and the evening was pleasantly spent. The following were those present:

Misses Jessie Ballard, Jessie Decker, Alma Faulkner, Lucy Tinsley, Adah Stephens, Nannie Riley, Ida Cole, Maude Cole, Flora Herndon, Mollie Smith, Lois Shively, and Lena and Elsie Wilson. Messers Geo. Tinsley, P. D. Black, R. H. Newitt, Chas D. Cole, Chas G. Black, Thos D. Tinsley, Fred, Hemphill, Alex Tinsley, W. B. Riley, W. H. Faulkner, W. S. Hudson and Dan Herndon.

Miss Albright is a charming hostess and the large crowd that filled the house and lawn were royally entertained. Ice and punch were served.

MEASURES ODOR OF FLOWERS

Balance Invented by Italian Physicist Shows Weight of the Perfume Emitted.

The amount of odor given off by flowers, essential oils and other substances has long been a matter of wonder, which has found expression in the statement that a grain of musk may perfume an apartment for years without appreciable loss.

But Signor Salvioni, an Italian physicist, has now made the loss measurable. He has devised a balance sensitive enough to weigh even odors, and said to depend for its chief part upon a very fine thread of glass fixed at one end and extending horizontally.

The substance to be weighed is placed on the free end. This causes a deflection, and the amount is measured by a micrometer, having a powerful magnifying glass for making its readings, great care being taken to avoid errors from such causes as temperature variations and air currents.

It is claimed that, with proper adjustment, a variation in weight as small as the thousandth of a milligram—or one fifteen-thousandth of a grain—can be accurately determined.—Newark News.

DIDN'T HAVE HIS NAPKIN ON

Farmer Thought His Wife Had Forgotten to Give One to Their Guest.

When Charles A. Cotterill was making up a motor car tour in northwestern Ohio not long ago with a member of congress, the machine got stuck in the mud and the party invaded a farmer's house with a request for dinner.

"I don't know you," said the congressman to the farmer, "and you don't know me, but you elected me to congress, and now I want you to give us a dinner."

The farmer and his wife furnished an elaborate meal, and it was when the repast was half over that the countryman, with a worried look, exclaimed to his wife:

"Mommie, you didn't give Mr. Cotterill a napkin."

"Oh, yes," said Cotterill quickly, "here it is," and he took it out of his lap and held it up for all to see.

"Oh!" apologized the farmer, "I thought you didn't have one because you didn't have it on."—Popular Magazine.

WANTS TO DRESS AS WOMAN.

From a prominent man who lives in Ware county, Controller General William A. Wright of Georgia has just received a letter expressing a desire to wear woman's attire, and asking permission to do so.

"I have very much the appearance of a woman, and when dressed as such and wearing long hair I look a perfect figure of a female and would not be noticed as being a man. I wish to adopt this attire because it is more suitable for me than male attire."

"It's the queerest letter I ever received," said General Wright. He withholds the name out of deference to the man's family.—New York Tribune.

GOOD PROSPECT.

She—Your uncle is still in the prime of life. You may have to wait a long time for your inheritance.

He—Oh, no! He just bought an airship yesterday.—Heitere Welt.

A HINT.

Nervous Sportsman—Your dog seems to be an intelligent animal.

Guide—He is, sir. Why, only yesterday he bit a lump out of a gent that only tipped me ten cents.—Milwaukee Sentinel.

AN UNFORTUNATE.

Proud Father—I believe, my dear, that the baby knows as much as I do.

Mother (gazing at the infant)—Yes, poor little fellow!

THE MYSTERY.

Miss Elderby—Do you really think that women propose?

Oldbach—If they don't there are a great many marriages I cannot account for.—London Tit-Bits.

PLACING THE BLAME.

"Only unmarried men wanted! That's the third job Eliza's done me out of this morning."—London Opinion.

Studebaker

Why You Take No Chances

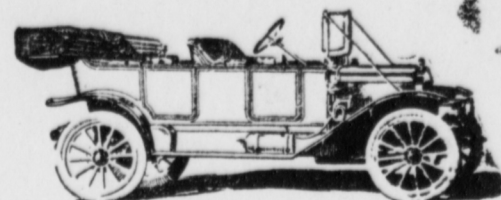

The Studebaker name for sixty years has been a guarantee of quality. It eliminates the slightest element of chance in your purchase of an automobile.

Every part of a Studebaker car is made in our own plants. We analyze and absolutely know the materials which go into our cars. Our guarantee is good.

75,000 Studebaker cars are on the road and every owner will tell you that a Studebaker car always makes good.

We know that the Studebaker (Flanders) "20" at \$800 is equal in material and workmanship to any car built—and the price is within your reach.

Ready for immediate delivery.

The \$800 Studebaker (Flanders) "20"

Price, Standard Equipped, \$800 f. o. b. Detroit. Equipped as above, with Top, Windshield, Prest-O-Lite Tank and Speedometer, \$885.

Steel Lined SHOT SHELLS

The Remington-UMC cut into a Good one

Each and Every One a Speed Shell

The speed that breaks your targets nearer the trap. That's why Remington-UMC Steel Lined Shells have won 13 out of the 15 Handicaps held in the last three years.

The speed that gets that mile-a-minute "duck" with a shorter lead—that's why it takes over 50,000 dealers to handle the demand for Remington-UMC Steel Lined Shells.

The Shooting fraternity are speed wise. They know loose smokeless powder won't drive shot. They know that the drive depends on the compression.

The powder charge in Remington-UMC shells is gripped in steel. This lining is designed to give the exact compression necessary to send the load to the mark quickest. It insures speed—the same speed in every shell.

The steel lining is moisture proof—no dampness can get through. Jar proof—no powder can get out. Waste proof—no energy is lost.
